DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 15 is rejected under 35 U.S.C. 102(b) as being anticipated by Osamu (4-314374).

Regarding claim 15, Osamu discloses on figure 1 a method of bandwidth control of a narrow band gas discharge laser having based line narrowing unit with grating 30 defining a grating face comprising the step of forcing flow of gas across said grating face (English Abstract of Osamu).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Osamu as applied to claim 15 above.

Application/Control Number: 09/716,041

Art Unit: 2815

Page 3

Regarding claim 16, Osamu discloses on figure 1 substantially all steps of a method set forth in the claimed invention except said gas flow being less than 20 liters per minute. However, it would have been obvious to one having ordinary skill in the art at the time of the invention was made to Osamu by having said gas flow being less than 20 liters per minute for the purpose of reducing fluctuation of beam profile and acquiring light of stable output (Abstract of Osamu), since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Regarding claim 17, Osamu discloses on figure 1 substantially all steps of a method set forth in the claimed invention except gas flow being between 1 and 8 liters per minute. However, it would have been obvious to one having ordinary skill in the art at the time of the invention was made to Osamu by having said gas flow being between 1 and 8 liters per minute for the purpose of reducing fluctuation of beam profile and acquiring light of stable output (Abstract of Osamu), since it has been held that where the general conditions of a claim are disclosed in the prior art discovering the optimum or working ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Allowable Subject Matter

Claims 1, 4-14 are allowed.

Response to Arguments

Application/Control Number: 09/716,041

Art Unit: 2815

Page 4

Applicant's arguments with respect to claims 15-17 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Nguyen whose telephone number is (703) 308-1269. The examiner can normally be reached on Monday-Friday, 7:30 am- 4:30 pm

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Thomas can be reached on (703) 308-2772. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-7382 for regular communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
